

# ASSIST Special Education Data 2014

Kentucky Department of Education  
October 2014

### GRADUATION RATE

Graduation rate for students with disabilities is calculated by dividing the number of graduates receiving regular diplomas by the sum of: graduates receiving regular diplomas plus number of received certificates (including secondary GEDs) plus number of dropouts plus number who maxed in age plus those who are deceased. This calculation is NOT comparable to the calculation used for the graduation rate for all students. Yellow shading indicates that district performance does not meet the state target.

### GRADUATION RATE

Graduation rate for students with disabilities is calculated by dividing the number of graduates receiving regular diplomas by the sum of: graduates receiving regular diplomas plus number of received certificates (including secondary GEDs) plus number of dropouts plus number who maxed in age plus those who are deceased. This calculation is NOT comparable to the calculation used for the graduation rate for all students. Yellow shading indicates that district performance does not meet the state target.

**GRADUATION RATE**

**4-Year Adjusted Cohort Graduation Rate Targets** - The “four-year adjusted cohort graduation rate” is defined as the number of students who graduate in four years with a regular high school diploma divided by the number of students who entered high school four years earlier adjusting for transfers in and out, émigrés and deceased students.

**5-Year Adjusted Cohort Graduation Rate Targets** - The “five-year adjusted cohort graduation rate” is defined as the number of students who graduate in five years with a regular high school diploma divided by the number of students who entered high school five years earlier adjusting for transfers in and out, émigrés and deceased students.

### DROPOUT RATE

Dropout rate for students with disabilities is calculated by dividing the number of special education dropouts from ages 14 through 21 by the total number of special education students enrolled who are ages 14-21. This calculation is NOT comparable to the calculation used for the dropout rate for all students. Yellow shading indicates that district performance does not meet the state target.

### DROPOUT RATE

Dropout rate for students with disabilities is calculated by dividing the number of special education dropouts from ages 14 through 21 by the total number of special education students enrolled who are ages 14-21. This calculation is NOT comparable to the calculation used for the dropout rate for all students. Yellow shading indicates that district performance does not meet the state target.

### LEAST RESTRICTIVE ENVIRONMENT

The Percent of students reported in <21% removed from regular class are those students in a co-teaching environment all day or in a special education resource room for up to 1 hour per day; the Percent of students removed from regular class >60% of the day are those students in your schools who are in a special education room for at least 4 hours or more per day; the Percent of students in Separate schools are those students who are enrolled in schools or programs specifically for children with disabilities. (Total percent will not add to 100.0% as not all LRE options are reported.) Yellow shading indicates that district performance does not meet the state target.

### LEAST RESTRICTIVE ENVIRONMENT

The Percent of students reported in <21% removed from regular class are those students in a co-teaching environment all day or in a special education resource room for up to 1 hour per day; the Percent of students removed from regular class >60% of the day are those students in your schools who are in a special education room for at least 4 hours or more per day; the Percent of students in Separate schools are those students who are enrolled in schools or programs specifically for children with disabilities. (Total percent will not add to 100.0% as not all LRE options are reported.) Yellow shading indicates that district performance does not meet the state target.

### TRANSITION RATES

Transition rates are calculated by data collected from the Youth One Year Out (YOYO) former student interview. The YOYO is conducted on students who exited the previous school year (2012-2013 data are from 2011-2012 exiters). The "N" is the total number of YOYO interviews completed by each district. Indicator 14A is the percentage of respondents enrolled in higher education in the year since exit. 14B is the percentage of respondents enrolled in higher education or competitively employed in the year since exit. 14C is the percentage of respondents enrolled in higher education, competitively employed, enrolled in other education or training, or in some other type of employment in the year since exit. Data at the state level are representative of all 2011-12 exiters in terms of ethnicity, gender and disability type, but dropouts are under-represented. When making decisions based on these data, please take into account the number of exiters who completed interviews, which in many cases is quite small. More detailed reports will be sent from the Kentucky Post School Outcomes Center in the near future. Yellow shading indicates that district performance does not meet the state target.

### TRANSITION RATES

Transition rates are calculated by data collected from the Youth One Year Out (YOYO) former student interview. The YOYO is conducted on students who exited the previous school year (2012-2013 data are from 2011-2012 exiters). The "N" is the total number of YOYO interviews completed by each district. Indicator 14A is the percentage of respondents enrolled in higher education in the year since exit. 14B is the percentage of respondents enrolled in higher education or competitively employed in the year since exit. 14C is the percentage of respondents enrolled in higher education, competitively employed, enrolled in other education or training, or in some other type of employment in the year since exit. Data at the state level are representative of all 2011-12 exiters in terms of ethnicity, gender and disability type, but dropouts are under-represented. When making decisions based on these data, please take into account the number of exiters who completed interviews, which in many cases is quite small. More detailed reports will be sent from the Kentucky Post School Outcomes Center in the near future. Yellow shading indicates that district performance does not meet the state target.

### TRANSITION RATES

Transition rates are calculated by data collected from the Youth One Year Out (YOYO) former student interview. The YOYO is conducted on students who exited the previous school year (2012-2013 data are from 2011-2012 exiters). The "N" is the total number of YOYO interviews completed by each district. Indicator 14A is the percentage of respondents enrolled in higher education in the year since exit. 14B is the percentage of respondents enrolled in higher education or competitively employed in the year since exit. 14C is the percentage of respondents enrolled in higher education, competitively employed, enrolled in other education or training, or in some other type of employment in the year since exit. Data at the state level are representative of all 2011-12 exiters in terms of ethnicity, gender and disability type, but dropouts are under-represented. When making decisions based on these data, please take into account the number of exiters who completed interviews, which in many cases is quite small. More detailed reports will be sent from the Kentucky Post School Outcomes Center in the near future. Yellow shading indicates that district performance does not meet the state target.
